

CycleX – FAQ (Quick Guide)

Rewards, eligibility, claiming, and official channels.

1) What is CycleX?

CycleX is a fully on-chain reward ecosystem designed for long-term token holders. No team allocations, no discretionary treasury control, and no manual reward decisions – rules are enforced by smart contracts.

2) Distribution Logic (per reward cycle)

- 9% rewards are distributed to eligible holders (claimable).
- For every reward cycle, the treasury burns an amount **equal to the distributed rewards** (1:1).
- An additional **20%** of the rewards amount is allocated to **Development & Operations** – sourced from the treasury only.

Example: For every **1 CYCX** distributed as holder rewards, **1 CYCX** is burned, and **0.2 CYCX** is allocated to Development & Operations. **Holders always receive their full 9% reward.**

3) When are reward cycles executed?

At the end of each quarter: **March, June, September, and December**. Target execution time: **20:00 London time (GMT/BST)**. For exact timing, check the countdown on cyclex.network.

4) Who is eligible for a reward cycle?

Hold tokens for at least **60 consecutive days** in a **self-custody Web3 wallet**. Exchange balances do not qualify. Transfers out can break holding continuity. Eligibility is computed from on-chain history and the cycle snapshot.

5) How do I check eligibility and claim?

Go to cyclex.network, connect your wallet, and check eligibility. Claims use **Merkle-proof verification**. If eligible, submit the on-chain **claim()** transaction (you pay gas).

6) Do unclaimed rewards roll over?

No. Claiming is required each cycle. Unclaimed rewards do not roll over.

7) Where are official updates published? (Anti-scam)

Official updates are published only through the project's official links (website, X/Twitter, Telegram). **Admins will never DM first.** Ignore private messages requesting wallets, funds, or “manual help”.

8) Is the treasury locked? What if it is exhausted?

Yes. Treasury assets are governed by deterministic on-chain logic (rewards, burns, and Dev & Ops allocations only). No administrators, overrides, or discretionary withdrawals. If the treasury is exhausted, rewards stop – **no surprise minting**.

Notice: Rewards are **not guaranteed** and depend on eligibility, protocol rules, smart-contract execution, and market conditions. This document is informational only (not financial advice).
